

Japan's Role in Global Health and Human Security

Prof. Keizo TAKEMI

Senior Fellow, Japan Center for International Exchange,

Research Fellow, Harvard School of Public Health

Professor, Tokai University

Why is global health on the global agenda?

- Reflections on the 2000 Okinawa G8 Summit
- Clarification of issues to be tackled
- Recommendations from an experienced policymaker
- Japan's past experience and progress on health
- Human security and health
- Issues to be discussed for Japan's future innovative role in global health

Why is global health on the global agenda?

- Poverty/Development and Health : Inseparable relations.
 - Social Determinants of Health
 - Increasing interdependence in Health
 - Influenza, HIV ; a matter of security, not limited to health
- Health as Global Agenda
- Foreign Policy and global Health
 - Issue on G8 and UN Assembly

Why is global health on the global agenda?

- Reflections on the 2000 Okinawa G8 Summit
- Clarification of issues to be tackled
- Japan's contribution on global health
- Japan's past experience and progress on health
- Human security and health
- Issues to be discussed for Japan's future innovative role in global health

Reflections on the 2000 Okinawa G8 Summit

- The Okinawa Infectious Disease Initiative
 - “Selection & concentration” strategy
 - Focusing on HIV/AIDS, malaria, and tuberculosis.
- It is estimated that global development assistance for health has grown from about US\$6 billion in 2000 to US\$14 billion in 2005.
 - Leverage effects of disease-specific assistance to develop new treatments for neglected tropical diseases.
 - Including, to name a few, the Global Alliance for Vaccines and Immunization, the Global Polio Eradication Initiative, the global health activities of the Bill & Melinda Gates Foundation and other private foundations, and various public and private initiatives.
- However, new challenges continue to emerge...

Why is global health on the global agenda?

- Reflections on the 2000 Okinawa G8 Summit
- **Clarification of issues to be tackled**
- Recommendations from an experienced policymaker
- Japan's past experience and progress on health
- Human security and health
- Issues to be discussed for Japan's future innovative role in global health

Issues to be tackled

- Social Determinants of health: Inevitable intersectoral cooperation
- Delay in achieving health-related MDGs
 - especially maternal, newborn, and child health (MNCH)
 - especially in Sub-Saharan Africa
- Weak health systems to deliver services
 - Human resource crisis in the health field
- Mushrooming of global health initiatives
 - IHP (International Health Partnership), Global Business Plan for MDGs 4&5, PEPFAR & PMI, International Catalytic Initiative, WHO, World Bank, etc.
 - Complex and overlapping set of activities with weak coordination
- Need to create political momentum and policy space
 - Health systems strengthening through a human security approach
 - Better coordination of global health initiatives to make a difference for people

Concern: fragmented understanding of health systems

- Need to re-establish a common understanding
- That is why global health is on the global agenda.
- Swinging pendulum
 - Stress on disease specific approach
 - Stress on health system strengthening
 - Need for well-balanced approach : Minister Koumura's speech.

Need to establish a common understanding through the G8 process

- Effective utilization of limited funding resources
- Rediscovering the importance of health workforce alliances and maternal and child health (MCH)
- Need for political commitment
 - Need to advocate tailor-made policies for each country

Japan's Role

- Japan can contribute to establishing health systems, underpinned by Japan's own experience with improving healthcare, particularly in areas of MCH and health system strengthening.
 - Promotion of **human security approaches**, reflecting Japan's own experience.
- **Health System Strengthening**
 - Supporting healthcare workers-**
 - Human resource development and retention as the essence of health system strengthening
 - Human resource development through empowerment including training, learning, motivation, etc.
 - Human resource retention through protection including financing, leadership and political commitment, etc.

What is human security?

- Definition of human security
 - To protect the vital core of all human lives in ways that enhance human freedoms and human fulfillment
- Strategies
 - *Empowerment*
 - enable people to develop capacity to cope with difficult conditions
 - *Protection*
 - set up by states, international agencies, NGOs and the private sector to shield people from threats

Japan's experience as a developing country right after World War II

- High prevalence of infectious diseases
- High infant mortality rate (IMR)
- Strengthening health care delivery system both in rural and urban areas
- Civilian efforts on infectious diseases and maternal and child health (MCH) through formal and informal collaboration

Japanese government's domestic strategy in the middle of the 20th century

Top Down

- Strong commitment by central government
 - Promoting good practices as a way to scale up
- Integrated Approach on MCH
 - MCH handbook as a tool for integrated services.

Bottom Up

- Service expansion to the communities by health workers
 - Public health nurses, midwives, as well as private physicians
 - Face-to-face communication in communities through outreach activities
- Support of the workers' activities by community volunteers
 - Child Rearing Associations by community volunteer groups (AIKU Groups; 1936-), Women's Anti-Tuberculosis Association (1950-)

One positive outcome

“Rapid decrease of IMR in Japan”

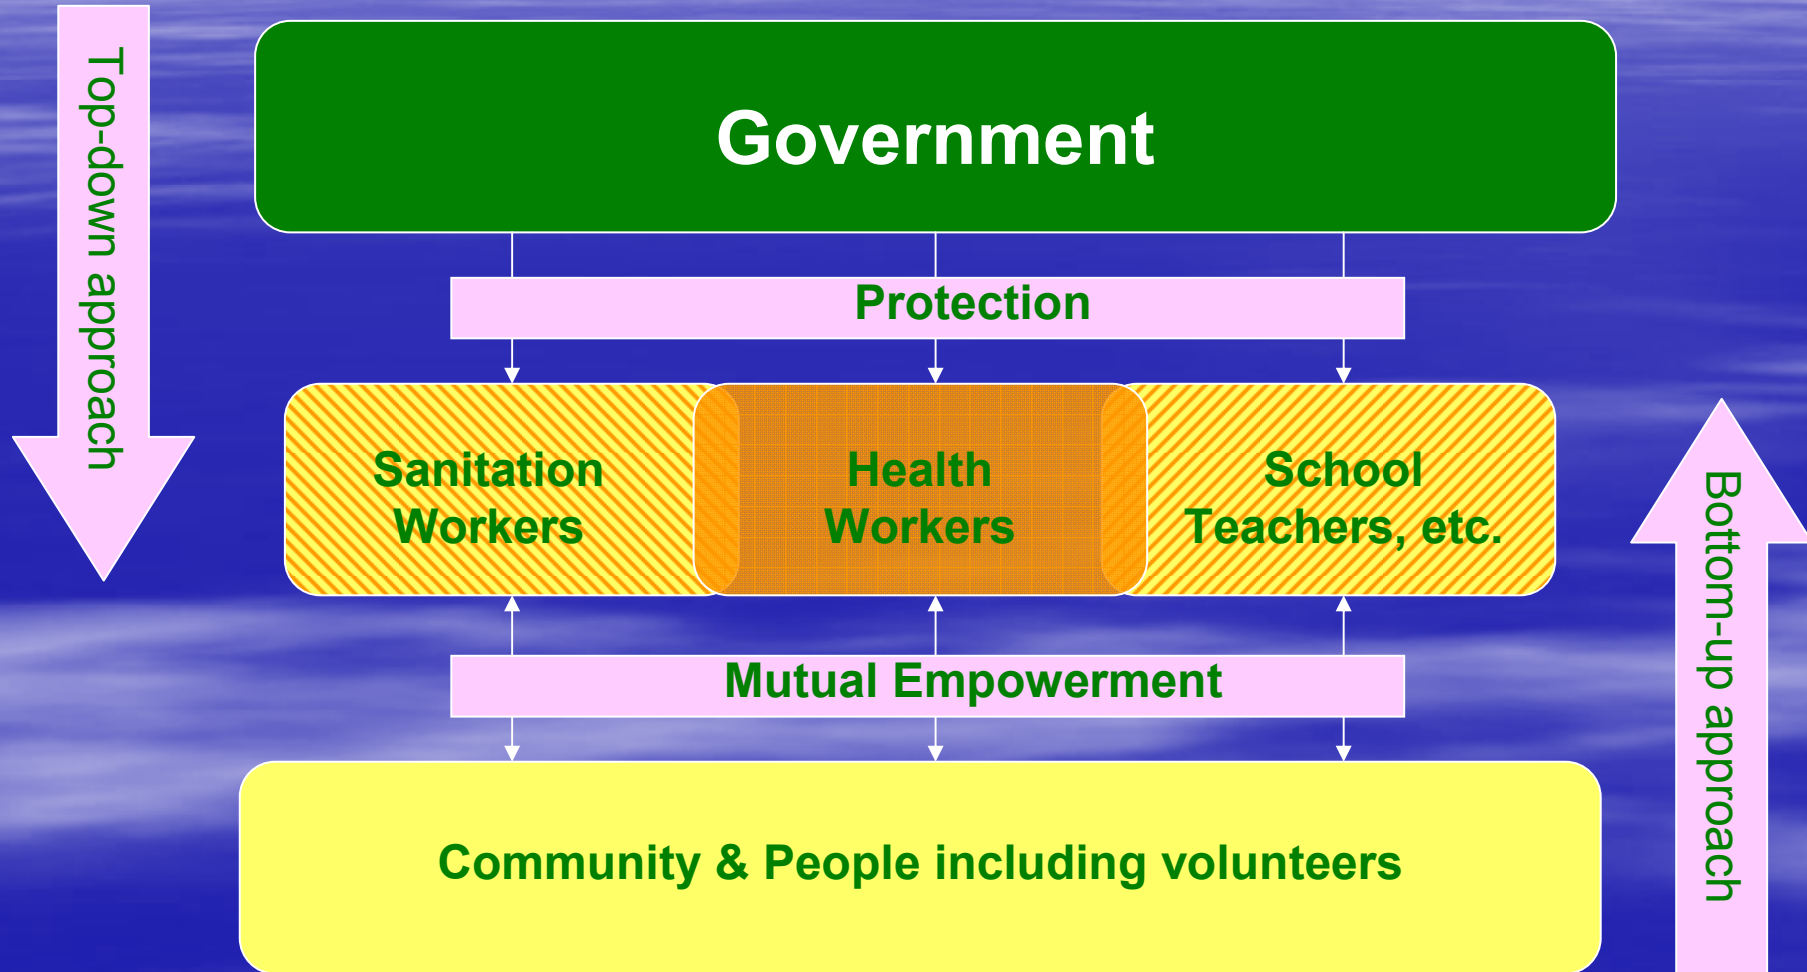

Sources: Ministry of Health, Welfare and Labor, Japan, 2006

Lessons learned from Japan's Experience

- Success of “two-sided” strategy
 - Strengthening of both top-down and bottom-up approaches
- Success of “selection and concentration” strategy
 - Focusing mainly on tuberculosis and MCH
- Success of health system strengthening
 - Service Integration through guidance tools such as Mother and Child Health (MCH) handbook
 - Wide spread of health workers to local communities
- Success of capacity development both for health workers in the community and volunteer organizations

Health System Strengthening

-Two sided strategy-

Health System Strengthening

-Support of health care workers-

- Human resource development and retention as essence of health system strengthening
 - Human resource development through empowerment including training, learning, motivation, etc.
 - Human resource retention through protection including financing, leadership and political commitment, etc.
- The essence of health systems is humans
 - *People are a vital ingredient in the strengthening of health systems.*
 - *When health workers leave to work elsewhere, there is a loss of hope and a loss of years of investment.*

Dr. Lee Jong-wook, World Health Report, 2006

Better balance in global health financing

- Challenges for more efficient investment between vertical program v.s. HSS..
 - Seeking new funding sources for HSS, while maintaining existing resources for vertical programs.
 - Seeking new ways to reallocate existing resources such as the GF to health system strengthening

How can we work them out?

Global action through participatory approach

- Creating political momentum and widening policy space in global politics
- G8 summit is the place to facilitate policy implementation

Study group on “Challenges in Global Health and Japan’s contributions”

- WG Leader : Prof. Keizo TAKEMI

WG members

- NGO representatives

- JCIE (Japan Center for International Exchange) → **WG secretariat**
- JOICFP (Japanese Organization for International Cooperation in Family Planning)
- Health Policy Institute, Japan
- The Nippon Foundation

- Experts

Univ. of Tokyo, Osaka Univ., Waseda Univ.

IMCJ (International Medical Center of Japan)

NIPH (National Institute of Public Health)

- Governmental agencies

- JICA (Japan International Cooperation Agency)
- JBIC (Japan Bank for International Cooperation)

- Ministries

- MOFA (Ministry of Foreign Affairs)
- MHLW (Ministry of Health, Labour and Welfare)
- MOF (Ministry of Finance)

* UN agencies are invited at moments as observers
